

Rome, 30 October 2015

Dear Gosia,

Dr. Galina Jokovic visited our Tinnitus Center in Rome from 28th September to 3rd October 2015 for the STSM “Multidisciplinary approach to diagnose and treat subtypes of tinnitus”. We shared with the participant multidisciplinary management sessions, including a complete ENT and audiological examination, psychological approach and intervention (Cognitive Behavioural Therapy, Mindfulness), specific programs of sound therapy (sound generators, hearing aids, COMBI), and Tomatis method. We organized, for the last day of the STSM (Saturday 3rd), a conference meeting on “tinnitus and hearing disorders” with the participation of our multidisciplinary team (Prof. A. Eibenstein, Dr. A. Fioretti, Dr. E. Natalini, Dr. S. Cicchiello, Dr. C. Stillitano, Dr. G. Peri). Dr. G. Jokovic spoke about her experience with tinnitus patients in Serbia. The meeting was very successful because we had 140 participants composed by clinicians and patients with tinnitus.

Finally, we set up a protocol of a multi-centre study regarding a newly introduced questionnaire about tinnitus perception and acceptance, proposed by Mag. D. Riedl in the previous STSM to characterize subtypes of tinnitus patients. The STSM signed the big opportunity to reinforce the scientific collaboration between the Tinnitus Center (Rome, Italy) and the ENT Hospital “dr Dragiša Mišović” (Belgrade, Serbia)

It's been a very big pleasure to host Dr. Galina Jokovic and to open our future collaboration.
